Demystifyin

A System Based Care Approach to Treating Biofunctional Disorders & Dento-Medical Issues

Complex dental issues and chronic facial pain are often the combined result of underlying biomechanical issues, including: craniofacial dental orthognathics, dentally deleterious medical conditions and environmental issues. The focus of this course is to provide attendees with:

- An understanding of the interrelationship of such conditions and their contribution to symptoms of chronic facial pain, TMJD, migraines, and biomechanical collapse and erosion of natural dentition.
- Evaluation, diagnosis, care planning, and effective predictable treatment systems.
- Business practice management and patient management tools to attract new patients and immediately implement biofunctional disorder philosoplies, which enhance patient treatment and practice profitability.
